

NEW

Servo Motor Torque Control Kit

The Servo Torque Control adds many capabilities to the quality of capping by monitoring and recording the applied torque on each cap.

This upgrade coupled with an HMI and our "Lazar Touch Software" allows the operator to monitor cap torques, decrease down time and maintenance, resulting in a higher production rate.

The Servo option can be added to a new or existing Lazar Capper, or to your existing Resina® Capper Models: U30/40, UN30/40 or NRC30/40
